PROFESSIONAL SUMMARY

Java Backend Developer with 5 years of experience designing, developing, and supporting enterprise backend applications within Banking and Financial Services domains.

Strong expertise in Java 21, Spring Boot, Microservices Architecture, MongoDB Atlas, REST APIs, Spring Security, and Workflow Automation using Camunda 8. Currently contributing to NatWest Bank's Financial Crime Case Management (FCCM) platform, delivering scalable solutions for case management, transaction monitoring, workflow orchestration, search services, audit processing, and regulatory compliance.

Hands-on experience in API development, MongoDB query optimization, JWT/RBAC security, production support, defect triage, root cause analysis, CI/CD pipelines, Kubernetes deployments, and Agile software delivery.

Passionate about building reliable, high-performance backend systems that solve complex business and compliance challenges.

TECHNICAL SKILLS

Languages: Java 21, Java (Core), SQL

Frameworks & Backend Development: Spring Boot, Spring Framework, Spring MVC, Spring Security, Spring Data MongoDB, Hibernate, Struts, JSP, GWT

Architecture: Microservices Architecture, REST APIs, Swagger/OpenAPI

Database Technologies: MongoDB Atlas, MongoTemplate, Aggregation Framework, MySQL, Liquibase

Workflow Automation: Camunda 8 (Zeebe), BPMN, Camunda Operate

Security: JWT Authentication, RBAC, Basic Authentication, AWS Secrets Manager

Cloud & DevOps: Docker, Kubernetes (kubectl), Helm, GitLab CI/CD, AWS (EKS, IAM, STS, S3)

Testing & Quality: JUnit 5, Mockito, Postman, Bruno

Tools: Git, GitLab, Maven, IntelliJ IDEA, Eclipse, Jira, Azure DevOps, Thymeleaf/OpenPDF (PDF export), JasperReports (JRXML)

AI-Assisted Development: GitLab Duo, Copilot, Atlassian Rovo, Kiro

Domain Expertise: Banking, Financial Services, FCCM, AML, Transaction Monitoring, Regulatory Compliance

Practices: SDLC, Agile Scrum, Application Support, Backend Application Development, Defect Resolution, Root Cause Analysis (RCA), Deployment Validation, Release Management, Code Review, Service Integration, Business Process Automation

PROFESSIONAL EXPERIENCE

Lead Engineer – Java Backend Developer **Jan 2025 – Present**

HCL Tech | Client: NatWest Bank | Project: Financial Crime Case Management (FCCM)

- Design, develop and maintain Java 21 / Spring Boot 3 microservices for NatWest's FCCM platform, used by financial-crime investigators; contributed to the Search, Application, Authorization, Transaction, Workflow, Admin and Liquibase microservices supporting regulatory workflows, with service integration to the Audit and Email services.
- Build RESTful APIs for case management, alerts, previous alerts and disclosures, customer/entity information, account and transaction analysis and selection, case notes, process tracker, case reassignment, workflow orchestration and search, documented with Swagger/OpenAPI.
- Developed configurable search capabilities using filtering, pagination, sorting, custom sorting and MongoDB aggregation pipelines with MongoTemplate for high-volume financial datasets; improved query performance with index-backed sorting and response projections.
- Implement stateless authentication and authorization with Spring Security, JWT claim decoding, role normalization and RBAC mapped to business actions, with credentials managed through AWS Secrets Manager.
- Deliver key FCCM modules: Search service APIs (alert, account exact-match and party-detail search), Previous Alerts, Account & Transaction Selection, Case Notes with PDF Export (Thymeleaf, OpenHTMLtoPDF), Process Tracker, case reassignment with optimistic locking, and the Admin screen (UI).
- Resolved production and SIT issues through debugging, root cause analysis, and code fixes across FCCM search, authorization, transaction, workflow, and case management modules within the FCCM platform.
- Supported application maintenance, defect resolution, deployment validation, and environment troubleshooting across Development, SIT, UAT, and Production environments.
- Developed and executed unit tests using JUnit and Mockito and performed API validation using Postman and Bruno to support application quality and release readiness.

- Support CI/CD, deployment validation and release processes (merge pipelines, Docker, Helm-based Kubernetes releases, GitLab); troubleshoot deployments and monitor pods, services and application logs using kubectl and AWS Systems Manager (SSM) across Development, SIT, UAT and Production environments.
- Collaborate with Product Owners, Business Analysts, QA Engineers, Architects and UK banking stakeholders in Agile Scrum teams; use AI-assisted tools (GitLab Duo, Copilot, Rovo, Kiro AI) to accelerate development and documentation.

Camunda 8 Workflow Automation

- Developed workflow automation solutions using Camunda 8 (Zeebe), Spring Boot, and REST APIs, designing BPMN workflows and integrating user tasks, service tasks, and backend services.
- Built and supported workflow management APIs for process execution, task lifecycle management, status tracking, and workflow monitoring using Camunda Operate

Application Developer **Jun 2022 – Jan 2025**

Conduent | Projects: Flex Rx Rebates (FRR), Flex Rx

- Developed and maintained enterprise web applications using Java, Spring MVC, Struts, JSP, GWT, Hibernate and SQL.
- Built user interfaces with GWT widgets, event handlers and JSP pages supporting Save, Update and Delete functionality.
- Developed and supported RESTful web services with Spring MVC (@GetMapping, @PostMapping) for client-server communication.
- Diagnosed and resolved defects across front-end and back-end components, debugging remote Java applications in Eclipse.
- Built JRXML reports with custom layouts and branding, with export to PDF, Excel and CSV.
- Analyzed user stories, identified service API requirements, provided effort estimates and tracked work in Azure DevOps within Agile teams.

Senior Associate **Dec 2021 – Jun 2022**

Genpact

- Completed technical and domain training and maintained project documentation supporting development, testing and knowledge sharing.
- Participated in code reviews to improve coding standards and application quality; delivered basic web application enhancements using HTML and CSS.

EDUCATION

Bachelor of Technology (B.Tech), Electronics and Communication Engineering **2021**

MJR College of Engineering & Technology

RECOGNITION

- Selected for the NatWest Bank FCCM project following participation in a Camunda workflow automation hackathon.
