PROFESSIONAL SUMMARY

Results-driven Pega Developer and Architect with software engineering experience, including 4+ years of hands-on Pega PRPC expertise delivering scalable, audit-ready workflow and case management solutions across the BFSI domain. Proven track record in designing enterprise-grade Pega applications, building reusable components, and driving end-to-end SDLC execution in regulated financial environments. Experienced in REST/SOAP integrations, batch processing, and compliance-adjacent workflows including KYC/CLM and process controls. Skilled in Pega's AI capabilities, including Generative AI, Agentic AI and agent interoperability through MCP and A2A, with a focus on applying governed, enterprise-grade AI to case management and workflow automation. Strong communicator with a high bar for quality, attention to detail, and a continuous learning mindset.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services, Systems Engineer | 09/2025 – Present | Gurgaon, India
Technologies: Pega PRPC 8.x / 25.x, Constellation UI, REST/SOAP Web Services, SQL, CLM-KYC Framework
Domain: BFSI
Summary: Working directly with a Europe based banking-client, where I'm involved in designing and implementing batch job automation solutions using Pega. The primary objective is to eliminate manual intervention in high-volume batch processes, which were previously time-consuming, error-prone, and dependent on human execution.

- Designed and implemented Pega-based batch automation solutions using Job Schedulers and Queue Processors, reducing ~80% manual intervention in banking operations.
- Re-engineered legacy manual workflows into scalable, automated batch processes, improving efficiency, accuracy, and SLA adherence.
- Developed reusable and configurable components for batch execution, reducing development effort and ensuring consistency across use cases.
- Integrated Pega with external systems via REST/SOAP services, enabling seamless data exchange for end-to-end batch processing.
- Implemented robust error handling, logging, and retry mechanisms, improving reliability and minimizing production failures.
- Over 1 year working with Pega Constellation – configured Form and Partial Views in App Studio, built reusable data-object views embedded across case types, and integrated case data via Constellation DX API v2 in a stateless architecture.
- Built custom React components for Pega Constellation (DX Components) to extend out-of-the-box UI and meet client-specific UX requirements.
- Designed and implemented Kafka-based background processing in Pega using Queue Processor rules – leveraging Pega's embedded Stream Service (Apache Kafka) for high-throughput parallel processing across partitions, with fallback to pr_sys_delayed_queue when stream nodes are unavailable, and dead-letter queue management via pr_sys_msg_qp_brokenitems.
- Collaborated with client stakeholders and cross-functional teams, supporting requirement gathering, UAT, and production releases in a client-facing role.
- **POC – Pega BIX Data Extraction:** Developed a proof-of-concept leveraging Pega Business Intelligence Exchange (BIX) to extract case and work object data from the Pega repository into flat files for downstream reporting and analytics. Configured extract rules, scheduled BIX runs via Job Schedulers, and validated data integrity against source records, demonstrating a scalable approach for audit-ready data pipelines in a regulated banking environment.

Infinite Computer Solutions, Pega Developer | 12/2022 – 08/2025
Technologies: Pega PRPC 8.x, Theme Cosmos & Cosmos React, REST/SOAP Web Services, SQL
Domain: BFSI
Summary: Worked as a core member in transforming Legacy Pension Fund into Modernized Digital Process.

- Designed and implemented end-to-end PRPC-based applications, including Flows, Assignments, SLAs, Screen Flows, and Correspondence Templates, improving case handling efficiency.
- Built reusable component strategies for enterprise Pega solutions, reducing development time and ensuring consistent implementation across projects.
- Integrated Pega with databases and external systems via SOAP and REST web services, enabling seamless workflow orchestration.
- Developed Properties, Decision Rules, Declarative Expressions, and Decision Trees to automate complex business logic.
- Debugged and resolved performance issues using Pega tools (PAL reading, Tracer, Clipboard, browser developer tools), improving application stability.
- Analyzed application server logs and alert logs to proactively identify and resolve production issues.
- Configured Job Schedulers, Queue Processors, and Pega OOTB rules to support asynchronous and batch processing requirements.

- Conducted knowledge transfer sessions for new team members, onboarding them to project architecture and best practices.
- Coordinated with onshore and offshore teams, providing daily status updates and ensuring on-time delivery.
- **POC – Conversational Chatbot using Pega DX API:** Built a proof-of-concept integrating Pega's DX (Digital Experience) API with a custom front-end chatbot interface to enable dynamic, headless case creation and interaction. Implemented REST-based DX API calls to initiate flows, navigate assignments, and capture user inputs in real time, demonstrating how Pega back-end workflows can power omnichannel conversational experiences without direct portal dependency.

FISERV India Pvt. Ltd., Associate | 06/2022 – 11/2022
Technologies: Pega PRPC 8.x, Theme Cosmos, Web Services, SQL
Domain: BFSI
Summary: Worked as a core member in transforming Legacy Pension Fund into Modernized Digital Process.

- Began as a QA Engineer building automation test scripts using Playwright and TypeScript under a BDD framework; proactively explored Pega PRPC during the engagement, which led to a full transition into Pega Development within 3 months, driven by a strong interest in BPM and workflow automation.
- Leveraged QA experience in defect identification and test execution to build a strong foundation in understanding end-to-end financial workflows, directly informing the transition into Pega development with a quality-first and process-oriented mindset.

SKILLS

BPM Platform: Pega PRPC Infinity, 8.x, 25.x, Constellation, CLM-KYC Framework

AI & Agentic (Pega): Pega GenAI (GenAI Connect, GenAI Blueprint, Knowledge Buddy, GenAI Coach), Agentic AI (Pega Agentic Process Fabric, AI agents within case workflows), Model Context Protocol (MCP) – exposing and consuming Pega workflows and data as MCP tools, Agent-to-Agent (A2A) protocol – multi-agent orchestration and interoperability

AI Foundations: Prompt Engineering, LLM Integration (REST APIs), RAG Concepts, Responsible and Governed AI in regulated BFSI workflows

Skills: Core Java, JavaScript, SQL

Architecture: Architectural Concepts (System Designs, Micro-Services), Kafka

Web Technologies: HTML5, CSS, React, Web Services (REST, SOAP)

Databases: Microsoft SQL Server, PostgreSQL

DevOps: Version Control – Git, Continuous Integration – Jenkins

Technologies: Containerization – Docker, Kubernetes, Cloud – Amazon Web Services (AWS)

CERTIFICATIONS

• Pega Certified System Architect (CSA) – v8.8
• Pega Certified Senior System Architect (CSSA) – v8.8

EDUCATION

BS (Bachelor of Science) – Data Science and Application (Off-Campus), IIT Madras | 2026–2030
B.Tech (Bachelor of Technology) – Mechanical Engineering, K.I.E.T Group of Institutions | 2015–2019
