

Name: Pankaj Prabhakar Bhamare

Email: pankajpbhamare2022@gmail.com

Mobile: 9561199551

Base Location : Pune

Profession : Software Development, Business Process Modeling

Date of Birth: 26/07/1992

Career Objectives

I'm a passionate software engineer and **logical problem-solver** who enjoys tackling complex challenges through analysis, experimentation, and **creative thinking**. As a Senior Specialist, I'm working toward a Software or Solution Architect role, specializing in business process orchestration and BPMN modeling. I aim to translate complex business processes into clear, effective workflows and build **readable, maintainable**, well-tested backend systems that help teams deliver reliable software.

Experience Summary

- **10+** years of experience in **BPMN process modeling, Java** backend development and **Integration** with **Camunda (7 years)** and Activiti BPMN (1.2 years). Combined experience in **BPMN: 8+ years**
- Use Windsurf, Devin, and GitHub Copilot in IntelliJ for code generation, testing, debugging, and queries; skilled in **prompt engineering** with Claude and GPT models.
- Delivered BPMN proofs of concept and implementations across **banking**, telecom, **MDM**, CRM, RAD.
- Built workflows for **product lifecycle management**, payroll, multilevel approvals, MDM, Camunda migration, and JMS-based data synchronization.
- Strong expertise in BPMN **events**, **correlation**, workflow patterns, and complex process scenarios; experienced in BPMN migration utilities and Java code generation with **Velocity**.
- Strong foundation in **OOP**, **data structures**, integrations, authorization, and **generic** and **recursive** algorithms; familiar with Salesforce CRM concepts, including leads, opportunities, and line items.
- Focused on writing concise, readable, reusable, maintainable code; improving performance; and **decomposing** monolithic systems into decoupled service tasks.
- Experience with SQL and NoSQL databases, including OrientDB and Elasticsearch; working knowledge of Groovy, Kotlin, and JavaScript.
- Enjoy collaborative problem-solving, **brainstorming**, and developing innovative solutions.

Work Experience

- **LTIMindtree**
  Java and BPMN integration and process modelling with Camunda. : 3 years 11 month
- **Tech Mahindra**
  Java and Kotlin development for CBA package in ONAP : 1 year 9 months
- **ContentServ**
  Java and BPMN integration and process modelling with Camunda. : 3 years 1 month
- **Paragyte**
  Activiti BPMN customization and Integration + Salesforce *(6 Months)* : 1 year 8 months

PROJECT DETAILS

PROJECT # 1

Organization	LTM
Title	Intelligent Document Processing
Environment	Camunda 7, Java, Maven
Team Size	10
Client	Banking Client
Duration	Feb 2026 to Oct 2026 (8 months)

Description

- Intelligent Document Processing (IDP) : It's a documents management system for banking documents.
- Documents are processed by Uploading it to IDP portal and next Upload Extraction and Review stages were already configured using Camunda.

Role: Sr Specialist, Software Engineering **Responsibilities:**

- Vulnerability fixes using VMAD and Veracode tools and Windsurf.
- Creating a new POC workflow decoupling from 3 basic stages Upload, Extract and Review to many reusable external tasks.
- Creating new foundation classes & external tasks for new Upload workflow.
- Marinating code simplicity, readability and maintainability by decoupling big monolithic code blocks to several different tasks (External Tasks)
- Resolving the challenges like Sync (delegates) and Async (external tasks) execution sequencing.
- Ensuring workflow design and backend classes are compatible to Camunda 8 migration in near future.
- Testing the new workflow end to end and verifying the results with old code.
- Utilizing the Devin/Windsurf for planning coding and test case writing.

PROJECT # 2

Organization	LTM
Title	CRM Deal Xpress
Environment	Camunda 7, Java
Team Size	10
Client	Banking Client
Duration	Jan 2023 to Dec 2025 (1 year 11 months)

Description

- Migration of BPMN workflows from a private legacy BPMN platform (IBM) to Camunda
- Integrated Camunda's Embedded process engine with a Java Application to perform straight through processing at first to achieve performance and reliability.
- Considered compatibility to Camunda 8 white migration.
- Imposed switching partially between legacy BPMN and Camunda BPMN applications for initial releases to avoid service failures. Later Camunda made Primary BPMN after many successful releasees and through testing.
- Developing APIs for comparison and mismatch notifications for comparing migration results.
- Utilized **Copilot** to generate ready-made code and tests to achieve faster development.

Role: Sr Specialist, Software Engineering **Responsibilities:**

- Listening to client requirements and mapping them to a compatible Camunda solution.
- Designing the target BPMN workflows as per the requirements.
- Writing Java delegates for service tasks to use in migrated workflows.

- Debugging and resolving bugs and vulnerabilities due to Camunda process engine configuration and correction as per the solution.
- Checking logs to find out exact root cause and source of a problem in a workflow and route the problem to respective team.
- Used tools such as Sync, Sonar Lint, Checkmax to identify and fix CVM issues and vulnerabilities in code libraries and configurations.

PROJECT # 3

Organization	LTIMindtree
Title	X2C Migration Utility, Workflow pattern
Environment	Camunda 8, Camunda 7, Java, Maven
Team Size	1
Client	Internal Project, Accelerator
Duration	May 2023 to June 2023 (2 months)

Role: Sr. Specialist, Developer

Description

X2C : X2C is a utility developed to facilitate migration from legacy BPMN platforms to Camunda. It generates boiler plate code such as java delegates or job workers using **Velocity Writer** and converts source BPMN files to Camunda BPMN files with some
metadata. This helps migration team to See BPMN will look and feel after migration. The job workers and java delegate will provide a running a sample backend code to test the migrated workflows.

- Going through the sample open-source projects for model generation.
- Debugging for analyzing the migration output regarding BPMN aspects.
- Parsing and extracting the meaningful metadata from the source BPMN platform project.
- Developing the migration features as per the requirement.
- Generating boiler plate codes such as Job workers for service tasks and endpoint for various triggers in the Camunda Process.
- Bridging/Compensating the gap between the private source BPMN platform and Camunda (target BPMN).

Workflow patterns : Workflow patterns are provided on a website
http://www.workflowpatterns.com/patterns/control/
I've implemented those patterns in Camunda 7 and tested them. Some patterns were not straightforward I designed compensatory workflows for such patterns.

- Analyzing the workflow patterns and Creating the BPMN process in Camunda implementing them.
- Running and validating the workflow pattern.
- Modeling the best possible implementation for a specific workflow pattern.
- Finding workarounds or compensating for the pattern using some tricks or alternatives if possible.
- Finding alternate pattern implementation if required.
- Listing workflow patterns as per criteria, remarks, comments.

PROJECT # 4

Organization	TechMahindra
Title	Java and Kotlin development in CBA package in ONAP
Environment	ONAP, Cloud, Kubernetes
Team Size	6
Client	German and India based Telecom domain clients
Duration	Feb 2021 to Nov 2022 (1 year 9 months)

Description

The Open Network Automation Platform (ONAP) is an open-source networking project hosted by the Linux Foundation. It brings the capabilities for designing, creating, orchestrating, and handling of the full lifecycle management of Virtual Network Functions, Software Defined Networks, and the services that all these things entail. In essence ONAP is the platform above the infrastructure layer that automates the network and services.

Client 1: German telecom client is based on an open-source software platform called ONAP.
Client 2: A POC project for Indian telecom client to explore and check how components in ONAP like AAI, SO, CDS etc. can be used for the potential client telecom domain's enhancement and SD-WAN related use cases.

Role: Sr. Software Engineer / SME **Responsibilities:**

Worked on java development for a microservice.

- Java development and testing
- Refactoring and code optimization

Working on Kotlin development for CBA packages

- Kotlin development and testing
- Development environment setup for Kotlin and CBA package
- Refactoring and code optimization
- Writing Unit test cases
- Analysis for BPMN workflow's customization in SO (Service Orchestrator)

PROJECT # 5

Organization	ContentServ
Title	BPMN Workflow development in PXP
Environment	Camunda BPM, Java
Team Size	10
Client	ContentServ's MDM Product, BUT
Duration	Jan 2018 to Feb 2021 (3 years 1 month)

Description

Camunda BPM was introduced in ContentServ's MDM Product to develop complex business workflows. The following advantages are added to the product using Workflows. Camunda's Embedded engine is integrated in their Product Experience Platform (PXP).

Role: Software Developer **Responsibilities:**

- To model a BPMN workflows in Camunda Modeler as per requirements.
- To automate a business process on events such as create, update, publish, blocked etc. on Product with Date and time frequencies (CRON Timer).
- Creating workflow demo cases for various clients
- One European client who required business workflow to handle a lifecycle of their MDM Product from its creation, publication, blocking and archival.
  - I modeled and tested the BPMN workflow in Camunda's BPMN designer.
  - Also wrote groovy scripts for triggering and handling events.
  - Implemented new BPMN subprocess for cancelable countdown timer.

- Implementing workflow components in backend as Java delegates & execution, task listener.
- Modifying and enhancing the workflows as per new requirements to business logic.
- Testing the workflow in various scenarios & finding loopholes.
- Trouble shooting problems occurred in workflow execution like stuck process instances.

PROJECT # 6

Organization	Paragyte Technologies
Title	Activiti BPMN Customization
Environment	Java, Spring
Team Size	3
Client	P10 & Bipod (Paragyte's own product)
Duration	Sep 2016 to Nov 2017 (1 year 2 months)

Description

Activiti is used here to enable their products to enable to configure business processes and developed some user friendly and useful BPMN components. Activiti source code is customized to integrate it with their products P10 & Bipod.

Role: Software Engineer / Developer **Responsibilities:**

- Implemented the following workflow components.
  - CRUDs Tasks: Integration with webservices like salesforce, drive etc.
  - Business rule task: Drools rule engine
  - Transformer task: Filtering & Transforming objects.
  - Mail Start Event: Email Listener for Outlook Office365 using webhook, etc.
- Created Date Time library for date comparison and manipulations in expressions.
- Email notifications on events like task creation, update etc.
- Triggering workflows and completing the tasks on email reply
- Created tree structure to simulate where clause on in memory objects to improve performance for Payroll workflow.
- Collaborating with BPMN UI designer in team for decision making.

PROJECT# 7

Organization	Paragyte Technologies
Title	ERP connector
Environment	Salesforce, Apex, Visualforce, Web Services, Ajax.
Team Size	2
Client	Internal Project
Duration	March 2016 to Aug 2016 (6 months)

Description

This Salesforce app is developed to integrate & connect Salesforce CRM with ERPs to sync & map Objects as per the specified scheduled frequency.

Role: Software Engineer / Developer **Responsibilities:**

- Involved in the Object & Field Mapping and Scheduler module.
- Writing triggers, visualforce pages, apex classes.
- Applied client-side validation using java script.
- Worked on scheduler's interface and CRON expression builder in controller.
- Used encryption to secure data transfer with web services.

Technical Expertise

Backend Technologies	Java, Spring
Frontend Technologies	HTML, CSS, JavaScript
Platform/Frame Works	Camunda 7,8, Activiti, Salesforce
Scripting Languages	JavaScript, Groovy
Operating Systems	Windows, Linux
Databases	My SQL, Orient DB, Elastic Search
Web Servers	Apache tomcat, jetty
IDEs	Eclipse, IntelliJ IDEA, Devin
Repositories	GIT, Source Tree
Build Tools	Gradle, Maven
AI tools	Copilot, Windsurf, Devin
CVM tools	Veracode, Vmad, Snyk, Checkmarx, Sonar lint

Education Qualifications

Course/ Degree	Stream	Institute / Collage	Board / University	Year of passing
CDAC	PG-DAC	Sunbeam	CDAC	2016
B.E.	Computer Engineering	Institute of Knowledge Collage of Engineering, Pune	Savitri bai Phule Pune	2015
Diploma	Computer Technology	Rajarshi Shahu Maharaj Polytechnic	MSBTE	2011

Personal Details

Name	Pankaj Prabhakar Bhamare
Father's Name	Prabhakar Daulat Bhamare
Mother's Name	Pushpa Prabhakar Bhamare
Date of Birth	26/07/1992
Marital Status	Married
Passport No.	U8799247 valid up to 21-FEB-2031

Extra-Curricular Activities / Hobbies:

- Gym, Running, Swimming
- Trekking, Climbing
- Infotainment (Health, Science, Nature, History).
