POOJA PATRE

Pega Developer | Pega Certified Senior System Architect (CSSA) | Pega PRPC • BPM • Case Management | 4+ Years

Bengaluru, Karnataka • +91 96570 30729 • patrepooja612@gmail.com • linkedin.com/in/pooja-patre-98ab62161

PROFESSIONAL SUMMARY

Pega Developer with 4+ years at Cognizant, building **case management applications** for a large US banking client. **Pega Certified System Architect (CSA v8.7)** and **Pega Certified Senior System Architect (CSSA, Infinity '23)**. Works across the full delivery cycle — requirement gathering, high-level and low-level design, **Pega PRPC** rule configuration, integration, testing, go-live and production support. Hands-on with **case types, process flows, activities, data transforms, data pages, declarative and decision rules, SLAs, work queues and reports**, plus **REST and SOAP web services** integration with core banking systems. Debugs using **Tracer, Clipboard, logs and Splunk**, writes **SQL** for data validation, and delivers in **Agile/Scrum** sprints.

TECHNICAL SKILLS

Pega Platform: Pega • Pega PRPC • PRPC • Pega Rules Process Commander • Pega Development • Pega BPM • Business Process Management (BPM) • Application Development • Pega Infinity '23 • Pega v8.7 / v8.8 • App Studio & Dev Studio • Pega Guardrails

Case Management: Case Management • Case Types • Case Lifecycle • Case Designer • Parent-Child Cases & Subcases • Process Flow • Flow Actions • Stages & Steps • Service Level Agreements (SLA) • Assignments & Routing • Work Queues / Workbaskets • Data Propagation • Case Locking

Pega Rules & UI: Activities • Data Transforms • Data Pages • Declarative Rules • Decision Rules • When & Validate Rules • Report Definitions (Joins, Associations, Sub-Reports) • Sections & Harnesses • Correspondence • Queue Processors • Job Schedulers • Agents • Access Groups & RBAC

Integration & Web Services: Web Services • REST • SOAP • Connectors & Services • JSON • GraphQL • Postman • JMS • Hogan API (Core Banking) • File & Email Listeners • API Response Handling

Programming & Database: Java • Coding • SQL • PL/SQL • MySQL • Oracle • OOAD • Debugging (Tracer, Clipboard, Log Analysis, Splunk) • Performance Tuning

Delivery & Tools: Agile • Scrum • Sprint Planning & Daily Stand-ups • Azure DevOps • JIRA • Requirement Gathering • HLD & LLD Design • Unit & System Testing • UAT Support • Go-Live & Post-Production Support • Deployment

PROFESSIONAL EXPERIENCE

Pega Developer — Apr 2022 – Present

Cognizant Technology Solutions — *Client: U.S. Bancorp | Banking & Financial Services | Pega PRPC* **Bengaluru, India**

- **Build and configure Pega applications end to end** — case types, process flows, stages, flow actions, sections and harnesses — turning business requirements into working case management solutions used daily by bank operations teams.
- **Gather requirements from business users** and prepare High-Level Design (HLD) and Low-Level Design (LLD) documents, then implement them as Pega rules within platform guardrails.
- **Configure core Pega PRPC rules** — activities, data transforms, data pages, declarative rules, decision rules, when rules and validate rules — keeping logic reusable and easy to maintain across releases.
- **Integrate Pega with core banking and external systems** using REST and SOAP web services with JSON and GraphQL payloads, testing every endpoint in Postman and handling API responses, errors and retries before release.
- **Set up SLAs, work queues, assignments and routing** so cases reach the right team on time, and configure Queue Processors and Job Schedulers for background and batch processing.
- **Build reports using Report Definitions** with joins, associations and sub-reports, giving operations and compliance teams clear visibility of case volumes, ageing and SLA breaches.
- **Debug and fix defects quickly** using Tracer, Clipboard, log files and Splunk, and write SQL queries to check records directly in the database when UI and backend behaviour do not match.
- **Deliver in Agile/Scrum sprints** — daily stand-ups, sprint planning and retrospectives — and support unit testing, system testing, UAT, go-live and post-production hypercare for every release.

KEY PROJECTS

- **eCHIPS — Disputes & Fraud Management** (Pega PRPC, REST APIs, Hogan API, Postman, SQL) — Pega application that lets bank customers raise disputes and fraud claims on their transactions and issues provisional credit based on the investigation outcome. Combines real-time and batch processing across multiple API and database components. Worked on customer search, intake channels, case processing, task and queue management, document and attachment handling, and reporting.
- **CIMS — Complaints Intake & Management System** (Pega PRPC, GraphQL, Postman, Hogan API, SQL) — Centralised complaint management platform built to replace legacy tools with one scalable Pega solution — unifying intake across channels, strengthening governance and helping the bank meet growing regulatory demands. Worked on intake, complaints processing, task and queue management, document management, reporting, and GraphQL integrations validated in Postman.

CERTIFICATIONS

Pega Certified Senior System Architect (CSSA) — Pega Infinity '23 • **Pega Certified System Architect (CSA)** — Pega v8.7
