ABOUT ME

Experienced Java developer with strong expertise across the full SDLC, including analysis, design, development, and deployment of Java Spring Boot applications in an Agile environment. Passionate about coding, problem-solving, and continuous learning, with a focus on improving software performance and user experience. Seeking a Java developer role that leverages technical expertise, analytical thinking, and creativity, while offering opportunities to contribute to innovative projects and further enhance technical skills.

Digital skills

- **Programming**: Java/J2EE, Kotlin, Angular, Typescript
- **Framework**: Spring Boot, Spring, Hibernate, J2EE, JPA, JDBC, Mockito (JUnit)
- **RESTful**: JAX-RS, Spring REST
- **DevOps**: Kubernetes, Docker, Azure, Rancher, Jenkins CI/CD, Elasticsearch, Helm Chart, Argocd
- **Version Control**: Gitlab, Bitbucket, GitHub
- **Databases**: MS SQL, MySQL, PostgreSQL, DB2, DBeaver, MongoDB Compass
- **Access / Security Tools:** Keycloak, CyberArk
- **Technologies**: Apache Kafka, Zookeeper, Camunda BPMN, BPMN process, Liquibase, Grafana, Prometheus
- **AI Tool:** Factory Droid, GitHub Co-pilot
- **Cloud Platforms**: Azure, GCP, OCP
- **Tools**: Eclipse, IntelliJ, VS Code, Maven, Postman, Jira, Apache Tomcat, JSON, Soap UI
- **Monitoring tools**: Splunk, Kibana, SonarQube, Fortify, Blackduck, CheckMarx, Mend, Aqua
- **Documentation**: Swagger UI, Confluence, SharePoint, Service Now, Microsoft Visio.

Work Experience

Senior Software Engineer | Finance Data Lake – FDL (US) ***Jan 2026-Sept 2026***

EY GDS – Pune

Project Details: Managed and monitored multiple microservices handling client data across various EY sites as part of an in-house project.

Responsibilities:

- Enhanced and managed **EY applications and user interfaces** using **Factory Droid AI tools**, while delivering scalable APIs across multiple business entities and modules.
- Developed enterprise-grade Java/Spring Boot microservices and REST APIs for release management, AI registry, and data integration platforms, supporting multi-tenant and event-driven architectures
- Implemented integrations using **Kafka**, **Snowflake**, **MongoDB**, **PostgreSQL**, and **Redis**, enabling asynchronous processing, workflow automation, data synchronization, and state management
- Strengthened platform security through **Azure** AD/JWT authentication, **RBAC** (Role based access control), **SSRF** protection, encryption, request validation, outbound URL controls, and vulnerability remediation
- Improved application performance, reliability, and scalability through query optimization**, N+1 query** reduction, outbox processing, automated testing, code quality improvements, and deployment automation.

Senior Software Engineer | Healthcare Interoperability – Da Vinci Prior Auth (US) ***Aug 2025-Dev 2025***

EY GDS – Pune

Project Details: Transforming healthcare applications for FHIR compliance, including mapping legacy clinical data to FHIR R4 resources, building RESTful FHIR APIs, and ensuring alignment with US Core, Da Vinci IGs, and SMART on FHIR standards. Skilled in using tools like HAPI FHIR and FHIR validators to ensure compliance and interoperability.

Responsibilities:

- Developed and enhanced FHIR-compliant APIs using Spring Boot and HAPI FHIR to support Da Vinci Prior Authorization (PAS) workflows.
- Implemented Coverage Requirements Discovery (CRD) and Prior Authorization Support (PAS) modules ensuring conformance with HL7 FHIR R4 specifications.
- Converted legacy healthcare data models into FHIR resources (Patient, Practitioner, Coverage, Claim, Task, Bundle) for interoperability between payer and provider systems.
- Performed validation and conformance testing using the Da Vinci CRD Server Test Suite, Inferno, and Touchstone tools to ensure regulatory compliance.
- Collaborated with cross-functional teams (FHIR architects, QA, and integration engineers) to ensure seamless FHIR data exchange and system reliability.

Senior Software Engineer | Health Insurance (Germany) ***Jan 2025-June 2025***

EY GDS – Pune

Project Details: Provides Health Insurance with multiple services for insure or non-insure to connect to the company for faster query resolution.

Responsibilities:

- Developed and maintained Java based Backend application for the development of the Chat Interface for Agent (Clerk) and insure interaction.
- Created CI/CD pipeline in Gitlab and prepared Helm charts for the deployment.
- Monitored the deployments using Grafana and Prometheus.
- Tested the end-to-end flow using Web UI and Android Mobile app.

System Engineer | US BANK- Camunda developer ***Jan 2023-Dec 2024***

Infosys - Pune

Project Details: Camunda Platform is a open-source automation processing tool which is used to design, automate and improve any process across the organization using BPMN processes and DMN decisions along with its several components.

Camunda Tools: Tasklist, Operate, Optimize, Zeebe, Identity, PostgreSQL, Elasticsearch, Keycloak, Zeebe gateway, Web Modeler, Connectors.

Responsibilities:

- Developed and maintained Java Spring Boot backend applications integrated with Camunda, actively participating in BPMN planning (including brainstorming, research, discussions, and finalization), process design, and implementation of workflows.
- Tested Camunda built-in and custom connectors, including SMTP and ServiceNow, and supported frontend teams with local application setup, execution, and testing.
- Deployed, installed, and upgraded Spring Boot and Camunda applications (multiple versions) on Kubernetes and Azure using Docker images, Helm charts, Rancher, and Jenkins CI/CD pipelines.
- Managed Kubernetes operations (clusters, namespaces, Helm-based deployments), resolved DevOps issues for multiple teams' applications, and developed/tested RESTful APIs using Postman (JSON) with PostgreSQL, MSSQL, and Elasticsearch.

Senior Operations Executive| US Bank- Card as a Service ***Jan 2021-Dec 2022***

Infosys - Pune

Project Details: CAAS is a Java Spring boot-based application which is used to create new cards, modify card details, implement and enhance the features for digital card holders and others using Rest APIs.

Responsibilities:

- Designed, developed, tested, and deployed Java Spring Boot–based microservices and REST APIs using Maven; wrote JUnit test cases, performed unit testing with Mockito, tested APIs using Postman (JSON), and managed database connectivity with JDBC Template and Hibernate/JPA.
- Worked in an Agile environment, collaborating with team members, Scrum Master, Product Owner, and architects on requirement analysis, design, code reviews, and milestone delivery, and created low- and high-level design documents including block diagrams, flowcharts, and Swagger documentation.

- Conducted Kafka POC and supported Java applications using Kafka producers and consumers; built Jenkins CI/CD pipelines for Kubernetes deployments, contributed to Spring Batch applications, and optimized complex SQL/NoSQL queries for cost reduction.
- Troubleshot issues with the QA team, addressed bugs and PII/PCI data concerns, improved code quality, identified and fixed security vulnerabilities using Fortify, Black Duck, and SonarQube, and applied domain knowledge in Banking and Financial Services including Cards, Payments, Capital Markets, Risk Management, and Financial Crimes.

Education

Bachelor of Science in Information Technology **2017-2020**
VSIT, Mumbai University
Field(s) of study: Information Technology | Final grade: A+, 9.10 | City: Mumbai

Certification

- Microsoft Certified: **Azure Fundamentals (AZ-900)**
- Microsoft Certified: **GitHub Co-pilot (GH-300)**
- Infosys Global Agile Developer Certification
- Infosys Certified Spring Boot Developer

Language: English, Hindi, Marathi
