SNEHA PAWAR

PEGA DEVELOPER

9527753284 | snehapawar972000@gmail.com | linkedin.com/in/sneha-pawar-931500208

PROFILE

PEGA Developer with **4+ years** of experience developing applications on the PEGA PRPC platform. Proficient in analyzing requirements and designing reusable code structures, with hands-on experience across requirement gathering, analysis, implementation, integration, deployment and maintenance.

SKILLS

- PEGA PRPC
- SLA Configuration
- UI Design: Section & Harness
- Constellation Adoption
- PEGA Flows & Flow Shapes
- Root Cause Analysis
- SQL
- Decision Tables & Maps
- DML & Patch Deployment
- HTML Stream Rules
- Unit Testing
- Declarative Expressions

WORK EXPERIENCE

Cognizant Technology Corporate Solutions

PEGA Developer – AIG OneClaim *Jan 2026 – Present*

- Working on **OneClaim**, a Pega PRPC application supporting claim-related business processes and functionality.
- Analyzed claim processing requirements, application workflows, business rules and data models.
- Developed Pega case workflows ensuring accurate automation across business processes.
- Configured Pega rules, decision tables and data transforms; built UI using sections, harnesses and dynamic layouts.
- Assisted in enhancements, data updates and configuration changes based on business requirements.
- Performed claim data validation and troubleshooting for claim details, status updates and processing issues.
- Analyzed clipboard data, logs and database queries to identify root causes and support technical fixes.
- Took part in defect analysis, testing and regression validation; collaborated with BAs, QA and developers and supported releases.

PEGA Developer – AIG-EMEA *May 2022 – Dec 2025*

- Pega PRPC development with hands-on expertise in DML, Patch, Data Patch and deployment processes.
- Designed and developed user interfaces using Sections, Harnesses and HTML Stream rules.
- Worked with Pega Flows and flow shapes; configured SLAs (Service Level Agreements).
- Implemented Decision Tables, Decision Maps, Declarative Expressions, When Rules and other rule types to drive business logic.
- Debugged and resolved application issues to ensure high availability and optimal performance; performed root cause analysis for incidents.
- Reviewed project requirements to align with customer expectations and resource planning.
- Maintained documentation and provided ongoing production support for Pega applications.
- Used Oracle Database, ServiceNow and WinSCP for development, ticketing and file management; worked independently and within cross-functional teams.
